

Content

Draft version

Chapter 1: Introduction

1.1 Context

1.2 Research gap

1.2 Related work

1.3 Objectives

1.4 Outline

Chapter 2: Theoretical background

2.1 Time series definition

2.2 Time series characteristics

2.2.1 Autocorrelation

2.2.2 Stationarity

2.2.3 Spectral entropy

2.3 Time series components

2.3.1 Definitions

2.3.2 Classical decomposition

2.3.3 STL decomposition

2.3.4 Strength of trend and seasonal component

2.4 Time series forecasting

2.4.1 Forecasting models

2.4.2 ARIMA

2.4.2.1 Structure

2.4.2.2 Model selection

2.4.2.3 Parameter estimation

2.4.2.4 Model checking

2.4.2.5 Forecasting

2.4.2.6 Accuracy evaluation

2.4.2.7 Transformations

2.4.3 Naïve forecasts

2.4.4 Seasonality

2.5 Time series clustering

2.5.1 Dissimilarity measures

2.5.2 Hierarchical clustering

2.5.3 Spatially constrained hierarchical clustering

Chapter 3: System architecture

3.1 Overall design

3.2 Software

3.3 System area

3.4 Database

3.4.1 Distance data

3.4.2 Usage data

3.5 Forecast request

3.6 Cluster loop

3.7 Model loop

3.8 Forecast loop

Chapter 4: Data & Experimental Design

4.1 Data source

4.2 Data pre-processing

4.3 Experimental desing

4.3.1 Training period

4.3.2 Test period

4.3.3 Benchmark

Chapter 5: Results & Discussion

5.1 Clustering

5.2 Model building

5.3 Forecasting

5.4 Computation times
